CUT SPELNG

PART III

DICTIONRY OF TRADITIONL & CUT SPELNGS

PART III Introduction to th CUT SPELNG DICTIONRY

1 Aknolejmnt

Th words in this Dictionry hav been selectd from th frequency listng of th Birmingham Corpus, th body of text wich undrpins th COBUILD Project and is held at th University of Birmingham. Th frequency listing was extractd by th Universitys Research and Development Unit for English Studies. It is hoped that, with this data as its sorce, th Dictionry has succeedd in combining compactness with systmatic covraj of th cor vocablry of th english languaj.

2 Selection of words

Th Dictionry aims to list al comnly ocurng english words wich ar ritn with fewr or difrnt letrs in Cut Spelng (CS). Uncut words apear only if users myt be temtd to cut them and ther unchanjed form therfor needs to be stated explicitly (eg, *comma**). In total som 10,000 hedwords ar included, many with two or mor inflections, and over 21,000 of th 57,000 most comnly ocurng alfabetic forms in th Birmingham Corpus word list ar covrd, eithr explicitly by being listd, or implicitly by remaining unchanjed. We may therfor estmate that CS simplifys over one english word-typ in thre — wich dos not of corse mean that this proportion of words in any one text wil be cut.

Th foloing categris of word ar jenrly excluded from th Dictionry:

- 1 words ocurng undr 5 times in th Birmingham Corpus of over 19 milion word-tokens.
- 2 words hos traditionl spelng is unchanjed in CS.
- 3 forms difrng only by an invariant afix from words that ar included (se foloing paje for 4 patrns of exampls).
- 4 most hyfnated forms.
- 5 many names of peple and places.

3 How to use th Cut Spelng Dictionry

Th CS form of a word may be found by looking up its TO form in th left-hand of th two colums in th Dictionry. If th word is cut in CS, th simplifyd form wil be givn against it in th ryt-hand colum; for instnce, against *the* we find th CS form *th*. If a word dos not apear in its own ryt, and no related word dos eithr, it can be asumed to be unchanjed in CS; for instnce, *of* and *but* do not apear, as neithr is cut in CS.

Very ofn th base-form of a word is givn, but, to save space, not al its derivativs. For instnce, *abandon+ed,+ing, abandonment* apear with CS equivlnts *abandn+d,+ng, abandnmnt*; but TO *abandons* is not listd, as CS simply ads th standrd sufix -S to its base form *abandn*, exactly as in TO, givng CS *abandn* + *s*. Simlrly, an entry such as TO *hopp+ed,+ing,* CS *hop+d,+ng* indicates that, altho TO *hopped, hopping* ar cut to CS *hopd, hopng*, th forms *hop, hops* ar uncut.

Othr derivativs that ar comnly omitd include:

- 1 nouns endng in -NCE, -NCY wen a related ajectiv endng in -NT is givn. Thus *abhorrence*, *clemency* ar not listd, as ther CS forms (*abhorence*, *clemncy*) ar derived from th CS forms of th related ajectivs (*abhorent*, *clemnt*).
- 2 adverbs, if they ar formd as in TO. So for instnce *hugely*, *abominably* ar not listd, since they ar formd by adng just -LY, -Y respectivly to th CS forms of th ajectivs *huje*, *abomnbl*.
- 3 nouns endng in -BILITY, since these ar formd predictbly from ajectivs endng in -BL. So *possibility* is not listd, as its CS form *posbility*, is derived from th CS form of th ajectiv *posbl*.
- 4 nouns endng in -ATION wich hav an equivlnt verb endng in -ATE or -IZE taking th same cuts. So *accommodation/organisation* ar not listd, as th CS forms *acomodation/orgnization* can be derived from CS *acomodate/orgnize*.

Many entris ar divided by brakets, plus-syns, commas and/or diagnl slashs. Th entry armo(u)r+er, +y, CS armr+r, +y first shos by th braketd (u) th british/americn TO variants armour/armor, wich alyn as CS armr; seend, plus-syns link base-words to sufixs, +er indicating th TO derivativ armo(u)rer, wich is reduced to CS armrr (th CS endng indicated by +r), wile th comma folod by +y shos th alternativ derivativ armo(u)ry, wich is reduced to CS armry. Slashs ar used to sho alternativ TO endngs as in *organise/ize* wich hav th singl CS form *orgnize*.

Compound words with only one cut elemnt ar usuly not listd as such, and shud be chekd undr th seprat elemnts. For instnce, *football* is not listd (nor is *foot*), but CS *footbal* is implyd undr TO *ball*, CS *bal*.

4 Alternativ and doutful forms

Wen alternativ spelngs exist in TO, th Dictionry recmends wichevr form best represents th pronunciation (hence CS *orgnize* rathr than *orgnise*). In som cases th preferd TO form is givn as th CS equivlnt to th less fonografic TO form: thus th entry for *gaol* givs *jail* as th CS form, altho TO *jail*, being

unchanjed, is not sepratly listd. Preferd americn spelngs ar indicated in th same way, *skeptic* for instnce being givn as th CS equivlnt of *sceptic*. By including such entris, th Dictionry is implying that, wethr or not riters use ful CS, they shud choose th mor fonografic of alternativ TO forms.

Som TO spelngs, nown as homografs or hetrofones, hav alternativ pronunciations acordng to meanng (eg, *row* for both 'dispute' and 'alynmnt', *graduate* as both a noun and a verb). Th Dictionry distinguishs these wher CS cuts only one of th words (eg, CS *row* for 'dispute', but *ro* for 'alynmnt'; *graduat* as th noun, but *graduate* as th verb).

Prefixd forms in jenrl ar ofn not listd, but a note in italics indicates that th base word shud be lookd up if th prefixd form is not givn. Thus for TO *uninteresting*, th user is referd to TO *interesting*, wich givs CS *intrestng*. Wen a prefix entails a repeatd consnnt at th boundry with th base word (as NN in TO *unnecessary*), alternativ forms ar givn, one with a singl consnnt, and th othr with th two consnnts hyfnated; so for TO *unnecessary, cleanness, penknife* we find CS *un(-n)ecesry, clean(-n)ess, pen(-n)ife*.

A few words retain som fonograficly redundnt letrs wich wud normly be cut. CS makes exeptions in these cases in ordr to prevent confusing ambiguity with othr, difrntly pronounced word forms; for instnce, by th norml cutng rules TO *choral*, *corral* wud both be cut to *coral*, a quite difrnt word, and *comma* to *coma*; simlrly, th norml rules wud cut both *croquette/croquet* to *croqet*. To indicate that th CS rules hav not been fuly aplyd in those cases, th Dictionry givs ther CS forms with a foloing astrisk as *choral**, *corral**, *comma**, *croqett**.

5 Foren words and propr nouns

It may be felt that th spelng of foren words shud not be cut, wethr because we ar not entitled to chanje th spelng of words from othr languajs, or because it is importnt to preserv intrnationly valid ritn forms. Howevr, som othr languajs systmaticly adapt th spelng of borod words (swedish rites *bureaucracy, restaurant* as *byråkrati, restorång* for instnce), and since so many english words hav at one staje or anothr been borod, it is not clear wich words, if any, shud be exemt from cutng on these grounds. Th Dictionry givs cut forms for many comn loan-words, mainly derived from french and italian, chiefly by way of ilustration, so that th implications may be consided. Riters shud use ther discretion wethr or not to use such radicly cut forms as CS *restran, baujlai* for TO *restaurant, Beaujolais*.

Similrly, even if CS wer adoptd for th spelng of ordnry words, it dos not necesrly folo that it shud or cud be adoptd for propr nouns, ie, th names of

peple and places. As with th foren words, this Dictionry includes CS forms for a ranje of persnl and place names, to ilustrate th efect. Clearly, ther ar th same advantajs in aplyng th CS principls to th spelng and pronunciation of propr nouns as to othr words: considr for instnce both th econmy and improved sound-symbl corespondnce of CS *Lestr, Chomly* compared with TO *Leicester, Cholmondely*. In practis, tho, it wud no dout hav to be left to th comunitis and individuls concernd to decide wethr to make such chanjes, just as in th past peple decided for themselvs wethr they wishd to spel ther names *Shakespeare* or *Shaxper, Browne* or *Brown*. Users of this Dictionry can howevr observ how th spelng of certn names wud chanje in CS.
